EDUCATION

DePaul University

B.S. Computer Science, Software Development

Expected Graduation: June 2027

GPA: 4.0/4.0

Relevant Coursework:

Data Structures, Computer Systems, Algorithms, Discrete Mathematics, Object-Oriented Software Development, Object-Oriented Enterprise Development, Database Systems, Distributed Systems, Program Language Concepts, Software Testing, Mobile App Development for iOS

SKILLS

Programming Languages: Java, Python, Swift, C, JavaScript, HTML, CSS

Operating Systems: Unix, Linux

Frameworks/Tools: Git, Maven, Java Spring Boot, React, Angular, Junit, Oracle, Docker, PostgreSQL

Technical Skills: API Integration, Dependency Management, Object-Oriented Programming, Enterprise Development, Backend Development, Frontend Development, Unit Testing, Integration Testing

EXPERIENCE

Associate Developer Intern | Blue Cross Blue Shield of Illinois

Jun 2026 – Aug 2026

- Developed and integrated a new full-stack feature for initiating insurance renewal requests within a microservices-based application deployed on Kubernetes.
- Designed and implemented a new Java/Spring Boot REST endpoint that integrated with an API owned by a separate development team to retrieve renewal request information and initiate the renewal process.
- Built the corresponding Angular frontend, enabling users to initiate and interact with the renewal workflow through a user-facing interface.
- Utilized Apache Camel to support backend service integration and communication between microservices and external/internal endpoints.
- Developed and maintained unit and integration tests using JUnit and Mockito to validate application functionality and service integrations.

Frontend Developer | Applied Philosophy of Science

Jul 2025 – Jan 2026

- Designed and implemented a Java-based mapping application to visualize geospatial data points on interactive and static maps.
- Integrated mapping libraries (GeoTools) to load base map tiles and render custom vector layers.

Supplemental Instruction Leader | DePaul University

Apr 2025 – Jun 2025

- Facilitated 2-3 weekly collaborative review sessions for Data Structures I students.
- Reinforced core concepts including linked lists, stacks, queues, trees, and recursion through guided practice.

PROJECTS

Portfolio Website

- Designed and implemented a single page React application to highlight personal projects and experience.
- Implemented interactive UI components using React and modern CSS.

Tech Stack: React, CSS

Live Site: <https://amy-fan.com/>

Puzzle Store

- Developed a full-stack e-commerce web application using Java Spring Boot, Thymeleaf, HTML, and CSS, implementing a layered architecture for product, user, and shopping cart management.
- Implemented Spring Security authentication and authorization with user login, registration, session management, and role-based access control for customer and administrator functionality.
- Integrated a relational database with Spring Data JPA/Hibernate to persist and manage users, products, categories, manufacturers, pricing, inventory, and cart data.
- Developed dynamic product search and multi-criteria filtering using Spring Data JPA Specifications, supporting filtering by category, difficulty, and price range.

Tech Stack: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, PostgreSQL, Thymeleaf, HTML, CSS
